

Northern California utility partners with MalikCo to Migrate from ProjectWise 2.0 repository to Enterprise Project Wise to support Gas Applications.

COMPANY PROFILE

The client is one of the largest combination natural gas and electric utilities in the United States, with over 20,000 employees that carry out the company's primary business – the transmission of delivery of energy.

BUSINESS CHALLENGE

In order to maintain complex 2D and 3D CAD drawings, and remote access by field and contract design staff, the client needed to Migrate from ProjectWise 2.0 repository to Enterprise Project wise to support Gas Applications. Without this project, gas transmission could not effectively conduct its construction portfolio, much of which is executed by 3rd party contractors. The timely and high availability of electronic documents to contractors was critical to avoid re-work, and the maintenance of accurate and complete records.

To achieve this goal, the project focused on:

- ❖ Taking the client from its current internally hosted ProjectWise solution to a cloud-based solution.
- ❖ Upgrading the infrastructure with various server and storage enhancements to support.
- ❖ Providing a scalable solution to address growing data and space requirements.

HOW MALIKCO HELPED

Malikco provided Project Management services to lead the utilities cross functional team, including strategic direction and hands on management of all aspects of the solution and project. MalikCo successfully lead the utility through the various project lifecycles, from requirements gathering, design, build, testing, training, deployment and post go live support doing so on time and on budget.

RESULTS DELIVERED

The Gas Application enhancements were made and the utility was strategically positioned to continue utilization of the product enabling for future scale as well as positioning the company to significantly expand the use of ProjectWise internally and for outside engineers and contractors.
